

MasonryGard 2-3% Sheen Level

MasonryGard is our newest formulation, designed to transform the appearance of your masonry whilst providing a barrier to ensure your home can withstand the elements for years to come. With its self priming and water-based properties this product comes in a variety of H+G colours to enhance the beauty of your home.

Our Additives

Hanford + Green have specially formulated these additives to enhance and improve your homes protection. These mix in solutions do not alter the appearance of your finish, but ensure a preventative shield against household mould and bacteria.

MicroSafe

MicroSafe can be added to H+G paints to reduce the spread of infection caused by harmful bacteria and is ideal for use in areas where a high level of cleanliness is required, for example, at a veterinary surgery or doctors surgery.

SplashGard

SplashGard is an additive that prevents the growth of mould on walls and ceilings in areas of high humidity, ideal for kitchens and bathrooms. Making cleaning easier and the colour look brighter for longer.

At Hanford and Green we pride ourselves on the quality and lasting durability of all our products not only that but all our paints follow the same characteristics, water-based, low odour , suburb coverage, rapid drying times, outstanding opacity the list goes on.

This leaflet breaks down the different finishes we offer, and will provide you with the knowledge you need to make the most informed decision when painting your space.

Our Finishes

Acrylic Matt 2-3% Sheen Level

A wonderfully chalky Matt H+G Matt provides a superb finish competing favourably with all high-end interior design paints but at a more affordable budget. There is no compromising here this paint is a delight to apply and gives a fantastic finish that others will envy.

Acrylic Low Sheen 7% Sheen Level

A highly resilient, slightly less chalky matt when a matt paint is specified in an area where an extra hard-wearing finish is required or perhaps in a high humidity environment, such as a kitchen or bathroom. H+G low sheen provides a little more sheen than matt, making it an extremely durable matt. An extra 3-4% sheen level produces a dry film that can be washed and scrubbed should the need arise without any compromise to the finish. Wonderful finish and fantastic to apply.

Acrylic Satin 20% Sheen Level

A highly resistant mid-sheen suitable for both indoor and outdoor use. Satin that will complement any application. A great all around satin that can be applied to anything anywhere.

Acrylic Gloss 80% Sheen Level

A high gloss that keeps an optimum sheen, unlike most water-based gloss paints, the sheen level endures. H+G gloss is a premium water-based gloss that outshines any oil-based comparison.

Acrylic UPVC 20% Sheen Level

A straightforward solution to a high-quality paint finish for PVC. This self-priming satin paint can easily be applied to any good, sound, clean PVC surface to enhance the appearance of doors and windows. H+G UPVC can be sprayed for the very best uniform finish; however, it can be applied by brush as a DIY project.

ScuffGard 20% Sheen Level

An extremely resistant satin that can be used both inside and out, H+G satin is resilient, but Scuffgard goes that bit further, using highly specified, incredibly durable extenders. This product does what the name suggests; scuffs become a thing of the past with ScuffGard.

TouchGard 20% Sheen Level

A resilient satin specifically designed to prevent paint degradation from applied and natural hand oils. Touchgard is most useful on handrails, doors and high contact areas. It is used mostly indoors, but is suitable for external use like garage doors. Prevents the degradation of paint through frequent contact with the human hand. The formulation used in Touchgard has been tested to prevent staining from most household and commercial contaminants. For example, Ketchup, Red Wine, Mustard, Oil, Coffee, Tea, Grease & Moisturising products are a few of the most typical substances that will simply wipe clean off TouchGard.
